## TYPHOON REPORTS POSITIVE RESULTS OF 0.201% U3O8 ON THE CÔTE-NORD PROPERTY

---

Laval, Quebec – April 8, 2008 – Typhoon Exploration inc. ("Typhoon") announces its latest sampling results on its Côte-Nord property located east of Havre St-Pierre in Quebec, where Typhoon has a 100% interest.

**The recently discovered uranium mineralization coincides with radiometric high anomalies. The radiometric airborne survey performed by GPR International shows important anomalies measuring several kilometers.**

The uraniferous mineralization is included within metric pegmatite with biotite, hematite, plagioclase, potassic feldspar and uraninite-uranophane. These dykes cut gneiss or leucocratic granite assemblage.

The samples were taken in different areas on the properties. Each of the new indices coincides with radiometric high anomalies.

The following figure represents the best results from this first reconnaissance phase. The samples were prepared by ELS CHEMEX in Val d'Or and the multi spectral analysis for uranium and thorium were processed at the ALS CHEMEX laboratory in Vancouver.

Sample #	Th (ppm)	U % U3O8
342307	17	0,188
342313	205	0.070
342314	218	0.089
342315	523	0.099
342316	1160	0.201

Typhoon plan an exploration campaign for this summer. There will be prospection work performed in addition to detailed mapping followed by stripping and channel sampling of the mineralized zoned discovered. The showings discovered during the first phase in 2007, will be blasted and drilled.

**Mr. Robert Gagnon, P. Geo.**, a Qualified person as defined by the National instrument 43-101, supervised the preparation of this news release.

**The shares of Typhoon Exploration are listed on the Venture Stock Exchange under the symbol «TOO».**
