TYPHOON INTERSECTS 10,84 G/T AU OVER 19,0 METERS AT FAYOLLE

Laval, Canada June 03, 2008 – **Typhoon Exploration Inc.** (« Typhoon ») announces a fifth series of results of 19 drill holes completed during the 2008 winter campaign on the Fayolle property owned 100% by Typhoon.

The FA-08-13 drill holes intersect 10,84 g/t Au over 19,0 meters at more than 150 meters (492 feet) of the Fayolle deposit. These drillings were performed to further investigate the vertical depth of the gold mineralization.

The results confirm the continuous in depth presence of mineralization in the west and southwest areas.

#DDH	From (m)	To (m)	Lenght (m)	Au (ppm)	Au (ppb)	Au (g/t)	Average

The firm continues its work on the Fayolle property focussing mainly on the eastern area where significant gold mineralization values were obtained with the FA-08-09 and FA-08-11 drill holes, 450 meters (1,480 feet) east of the Fayolle deposit. (Refer to May 20th and 28th 2008 press releases). **Several drilling analysis are presently in progress and will be announced as soon as available.**

Mr. Robert Gagnon, P. Geo., Technical Advisor, a Qualified Person as defined by National Instrument 43-101, supervised the preparation of the information in this news release.
