TYPHOON: AT THE CORE OF THE DESTOR-PORCUPINE GOLD STRUCTURE

Laval, Canada November 11, 2008 – Typhoon Exploration Inc. (Venture Stock Exchange «TOO») has recently discovered a new showing, « Mc Donald showing», at more than 450 meters (1 480 feet) east of the Fayolle deposit. This discovery confirms the great gold potential of the Fayolle property located at the core of a significant metallotect (Destor-Porcupine) that has produced over 75 million gold ounces since the beginning of the last century. (See appended map).

The Mc Donald showing is located at more than 1,2 km of the Aiguebelle-Goldfields showing where several significant gold values were investigated by drilling. Therefore, the distance between the showings confirm once more the gold potential of the Fayolle property and prove the relevance of exploration works.

The Fayolle property covers an area of more than 26 km² including 8 km at the core of the Destor-Porcupine gold structure. The Fayolle deposit, comprising more than 188,000 ounces of inferred gold resources (see January 19, 2007 press release), covers only approximately 1% of the property's surface, indicating the possibility of a great gold potential.

Several exploration works are in progress on the Fayolle property.

Mr. Robert Gagnon, P. Geo., Technical Advisor, a Qualified Person as defined by National Instrument 43-101, supervised the preparation of the information in this news release.

The common shares of Typhoon Exploration are listed on the Venture Stock Exchange under the symbol «TOO».
