TYPHOON: UPDATE ON MONEXCO PROJECT

Laval, Canada November 25, 2008 – Typhoon Exploration Inc. (« Typhoon ») announce an update of the 2008 exploration works on the Monexco property in Quebec.

Following the 2007 works, a detailed photo-structural study was realized and integrated into a 2D Gocad compilation of the whole property. This compilation allowed noticing the influence of structure N40E in staircase in the corridor of River France and the possibility of repeating the same association towards the N-E (structural assembly in level).

Typhoon has undertaken several works to verify this structural hypothesis. The following works were realized:

- Prospecting and sampling of targets pre-established during the compilation
- Stripping of the targets
- Channel sampling and detailed mapping
- Additional line cutting in the East and North-east area
- Additional survey of PP on the new line cutting.

Typhoon is currently finalizing the data compilation of these works and the results will be available soon.

Mr. Robert Gagnon, P. Geo., Technical Advisor, a Qualified Person as defined by National Instrument 43-101, supervised the preparation of the information in this news release.

The common shares of Typhoon Exploration are listed on the Venture Stock Exchange under the symbol «TOO».
