TYPHOON EXPLORATION SHOWS MONEXCO A GOLD-BEARING POTENTIEL

Laval, Canada December 3, 2008 – Typhoon Exploration Inc. (« **Typhoon** ») is pleased to confirm the gold-bearing potential of the Monexco property located in Chibougamau, Québec.

Work carried out in 2007 has allowed us to define a geological structural model. Further to the 2D Gocad compilation and 2008 exploration works, the pre-established model seems to take shape at the junction of N40E structures and the deformation corridor in staircase and/or in level.

The site observations, compilation and channel sampling are showing that this structural assembly allowed the concentration of the gold-bearing mineralization inside a corridor, defined to date on approximately 400 meters East-West by 120 meters North-South.

The best stripping analysis results of summer 2008 have confirmed the past results inside the mineralized corridor. The table below shows these results:

Stripping	Sample	Au (ppm)	Length (m)	Average (ppm/m)
No. 1	812545	1.95	0.5	2.065 / 1.0
	812546	2.185	0.5	
	566553	1.977	0.5	5.579 / 3.5
	566554	1.698	0.5	
	566555	3.403	0.5

	566872	5.51	0.5	

During the 2008 exploration season, prospecting and mapping with sampling of the property North-East and East area revealed the possibility to expand the gold-bearing corridor with significant gold values in selected samples. The best results were 29.9 g/t, 13.8 g/t, 12.1 g/t, 38.2 g/t and 32.7 g/t, gold.

Mr. Robert Gagnon, P. Geo., Technical Advisor, a Qualified Person as defined by National Instrument 43-101, supervised the preparation of the information in this news release.

The common shares of Typhoon Exploration are listed on the Venture Stock Exchange under the symbol «TOO».
