## TYPHOON INTERSECTS 2.41 G/T GOLD OVER 7.6 METERS, 800 METERS FROM THE FAYOLLE SHOWING

---

Laval, Canada, June 5<sup>th</sup>, 2007 – TYPHOON EXPLORATION INC. (the «Company»; TSX-V: TOO) announce drill results on the Aiguebelle-Goldfields Property (under option from Agnico-Eagle Mines), located in the Rouyn-Noranda Mining Camp (Quebec), located approximately 800 meters West of the Fayolle Showing.

A total of 5,265 meters were completed on Aiguebelle-Goldfields during this drilling campaign. For this campaign, most of the holes were drilled in the central and western segments of the Aiguebelle-Goldfields Showing to validate the known mineralization and test the lateral and depth extensions. One hole was drilled to the east to confirm a NE-SW fault and one hole to the north to verify the position of the gold hosting lithologies from Fayolle.

In the central portion of the showing, where historic drilling intersected the best gold values, the Company cut Fayolle-type ultramafic units (komatiites). **Drill hole AIG-06-06 intersected 2.41 g/t gold over 7.6 m.** The best interval results obtained during the campaigns are:

DRILL HOLE #	FROM (meters)	TO (meters)	LENGTH (meters)	GRADE (g/t gold)
AIG-06-05	120.5	122.0	1.5	1.50
<b>AIG-06-06</b>	<b>91.9</b>	<b>99.5</b>	<b>7.6</b>	<b>2.41</b>
inquant	91.9	93.0	1.1	3.67
inquant	96.0	97.5	1.5	3.52
AIG-06-07	187.5	189.0	1.5	0.63
AIG-06-08	104.0	105.5	1.5	0.47
AIG-07-01	109.0	110.5	1.5	2.33
AIG-07-01	206.0	208.0	2.0	3.01
<b>AIG-07-02</b>	<b>69.5</b>	<b>75.5</b>	<b>6.0</b>	<b>1.61</b>
inquant	72.5	74.0	1.5	2.19
AIG-07-07	52.5	54.0	1.5	0.45
<b>AIG-07-09</b>	<b>149.5</b>	<b>152.0</b>	<b>2.5</b>	<b>1.41</b>
AIG-07-12	320.5	323.5	3.0	0.49

\* Drill holes AIG-07-03 to 06, AIG-07-08, AIG-07-10 and AIG-07-11 did not intersect any significant values.

The mineralized zone in AIG-07-09 was re-analyzed using the « Metallic Sieve » method in order to check for a coarse gold component. More than 2% of the re-assayed sample gave coarse gold (grain greater than 100 mesh size) values between 1.06 g/t gold and 6.00 g/t gold. Additional metallic sieve analysis will be completed to check for this component.

Typhoon Exploration was pleased to observe gold in this area and particularly that the geology appears to indicate favourable conditions for gold mineralization similar to Fayolle.

**The Company is currently advancing the 2007 drilling at Fayolle** (wholly owned by Typhoon).

The Company has the option of acquiring up to 51% of the Aiguebelle-Goldfields Property from Agnico-Eagle Mines (*refer to press release dated March 9, 2006*).
