## ACQUISITION OF A PROPERTY WITH URANIFEROUS POTENTIAL

---

Laval, Canada April 16, 2008 – Typhoon Exploration Inc. (« **Typhoon** ») announces that it has reached an agreement to acquire a 100% interest in the U3O8 property.

**The property is comprised of 57 claims**, located in the Havre Saint-Pierre area. Due to this property's proximity to the Côte-Nord property, 100% owned by Typhoon, it benefits from the same access advantages. This addition will permit a survey of the some expansions of the mineralization discovered during the autumn 2007 campaign.

Following the terms and condition of the agreement, Typhoon has committed to issue **950 000 common shares and to disburse 6 000 \$ CAN** to the vendor upon signature of the contract. The property has a 2% royalty in favour of the vendor, if the mine is placed into commercial production.

Typhoon hired the consulting firm Modelaur to proceed with a petrographical survey of various mineral bearing facies. The result of this survey shows that the mineralization discovered on the Côte-Nord property is mainly constituted of uranothorite. A common vector seems to unite the various petrographical phases surveyed; the increase of chloritization observed at the biotite level. This increase of chloritization could have favoured, to a certain extent, a further remobilization of the uranium. This practical hypothesis will be applied on site during the 2008 campaign.

**Mr. Robert Gagnon, P. Geo.**, Technical Advisor, a Qualified Person as defined by National Instrument 43-101, supervised the preparation of the information in this news release.

**The common shares of Typhoon Exploration are listed on the TSX Venture Exchange under the symbol « TOO ».**
