TYPHON EXPLORE TO MONEXCO, OPINACA, CÔTE-NORD AND FAYOLLE

Laval, Canada July 10, 2008 – **Exploration Typhon Inc. (TSX-V: TOO)** announces that several exploration campaigns are underway on the Monexco (Chibougamau), Opinaca (Baie James), Côte-Nord (Côte-Nord), and Fayolle (Rouyn-Noranda) properties, all owned 100% by Typhon.

- **Monexco:** The new VG gold-bearing zone, sampled in the summer of 2007, has yielded coarse, angular fragments of native gold and a value of 40 g/t Au over one (1) meter (Au, metallic sleeve). The other sampled sites yielded values of 12,49 g/t Au over 1 meter, and 8,47 g/t Au over 1 meter (see Press Release dated March 11, 2008). This new mineral showing, located at more than 150 meters from the Monexco showing, linked to an IP (induced polarisation) anomaly parallel to the France river East-West deformation corridor. Typhon is currently verifying the connection to the Monexco gold-bearing zone through stripping, channel sampling, induced polarization survey, glacial and creek sediment surveys, mapping and prospecting.
- **Opinaca:** Work on this property involves checking if there is presence of gold, uranium and diamond.
- **Côte-Nord:** Spectrometer prospecting and mapping are underway over the entire property in order to check if there is presence of uranium.
- **Fayolle:** Preparation for the new drill campaign, which will begin in autumn, 2008.

And finally, the agreement to purchase a chrome and platinum-bearing property announced on June 19 was not concluded. Therefore, the parties involved have both agreed to end the discussions.

Mr. Robert Gagnon, P. Geo., Technical Advisor, a Qualified Person as defined by National Instrument 43-101, supervised the preparation of the information in this news release.

The common shares of Typhoon Exploration are listed on the Venture Stock Exchange under the symbol «TOO».
